Asthma Drugs

Asthma is a chronic inflammatory airway disease that causes reversible bronchoconstriction.
It is treated by:

1. Bronchodilators (Relieve symptoms) ✅

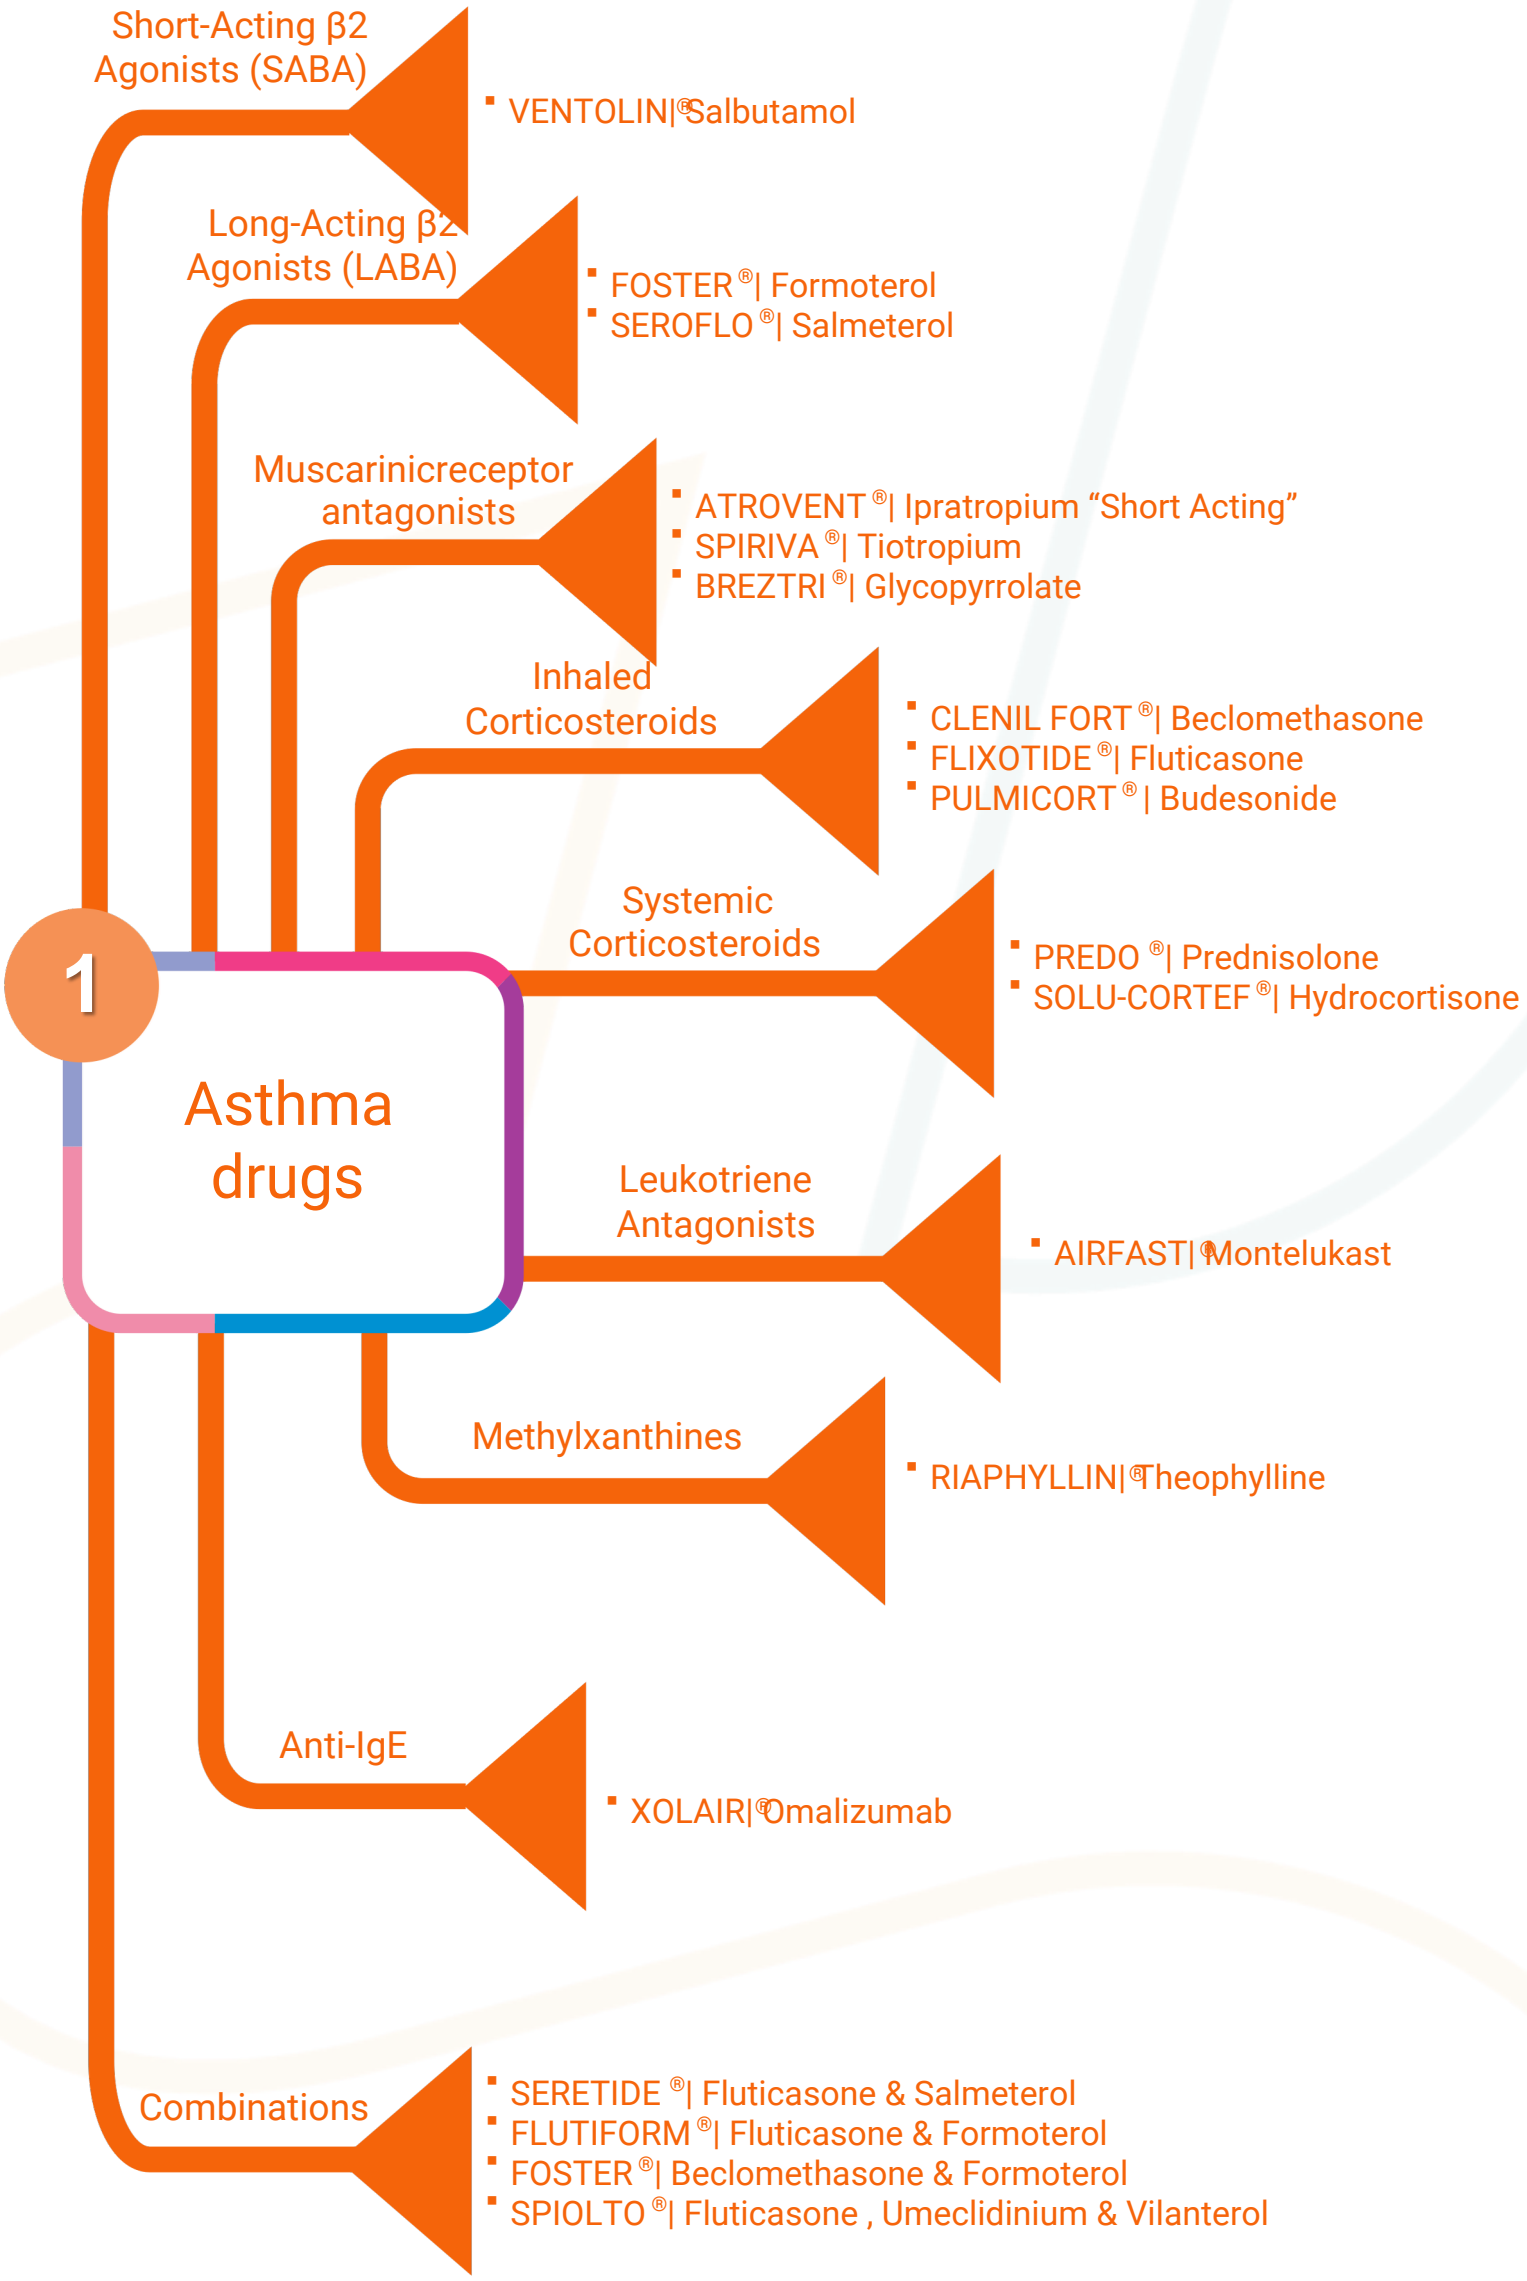

- SABA (Short-acting beta2 agonists) for quick relief: e.g. Salbutamol.
- LABA (Long-acting beta2 agonists) for long-term control: e.g. Salmeterol (usually used with ICS)
- Muscarinic blockers (Anticholinergics): e.g. Ipratropium, Tiotropium.
- Methylxanthines (Has Narrow therapeutic index, rarely used): e.g. Theophylline.

2. Strong Anti-inflammatory Agents (Control inflammation) ✅

- Inhaledcorticosteroids(ICS)used for maintenance: e.g. Budesonide, Fluticasone
- Systemic corticosteroids in severe cases: e.g. Prednisone

3. Prophylaxis / Controller Therapy ✅

- Leukotrieneantagonists:e.g.Montelukast.
- Anti-IgE therapy: e.g. Omalizumab.

1
Asthma drugs
Short-Acting β2 Agonists (SABA)
VENTOLIN® Salbutamol
Long-Acting β2 Agonists (LABA)
FOSTER® Formoterol
SEROFLO® Salmeterol
Muscarinicreceptor antagonists
ATROVENT® Ipratropium "Short Acting"
SPIRIVA® Tiotropium
BREZTRI® Glycopyrrolate
Inhaled Corticosteroids
CLENIL FORT® Beclomethasone
FLIXOTIDE® Fluticasone
PULMICORT® Budesonide
Systemic Corticosteroids
PREDO® Prednisolone
SOLU-CORTEF® Hydrocortisone
Leukotriene Antagonists
AIRFAST® Montelukast
Methylxanthines
RIAPHYLLIN® Theophylline
Anti-IgE
XOLAIR® Omalizumab
Combinations
SERETIDE® Fluticasone & Salmeterol
FLUTIFORM® Fluticasone & Formoterol
FOSTER® Beclomethasone & Formoterol
SPIOLTO® Fluticasone , Umeclidinium & Vilanterol

Cough Remedies

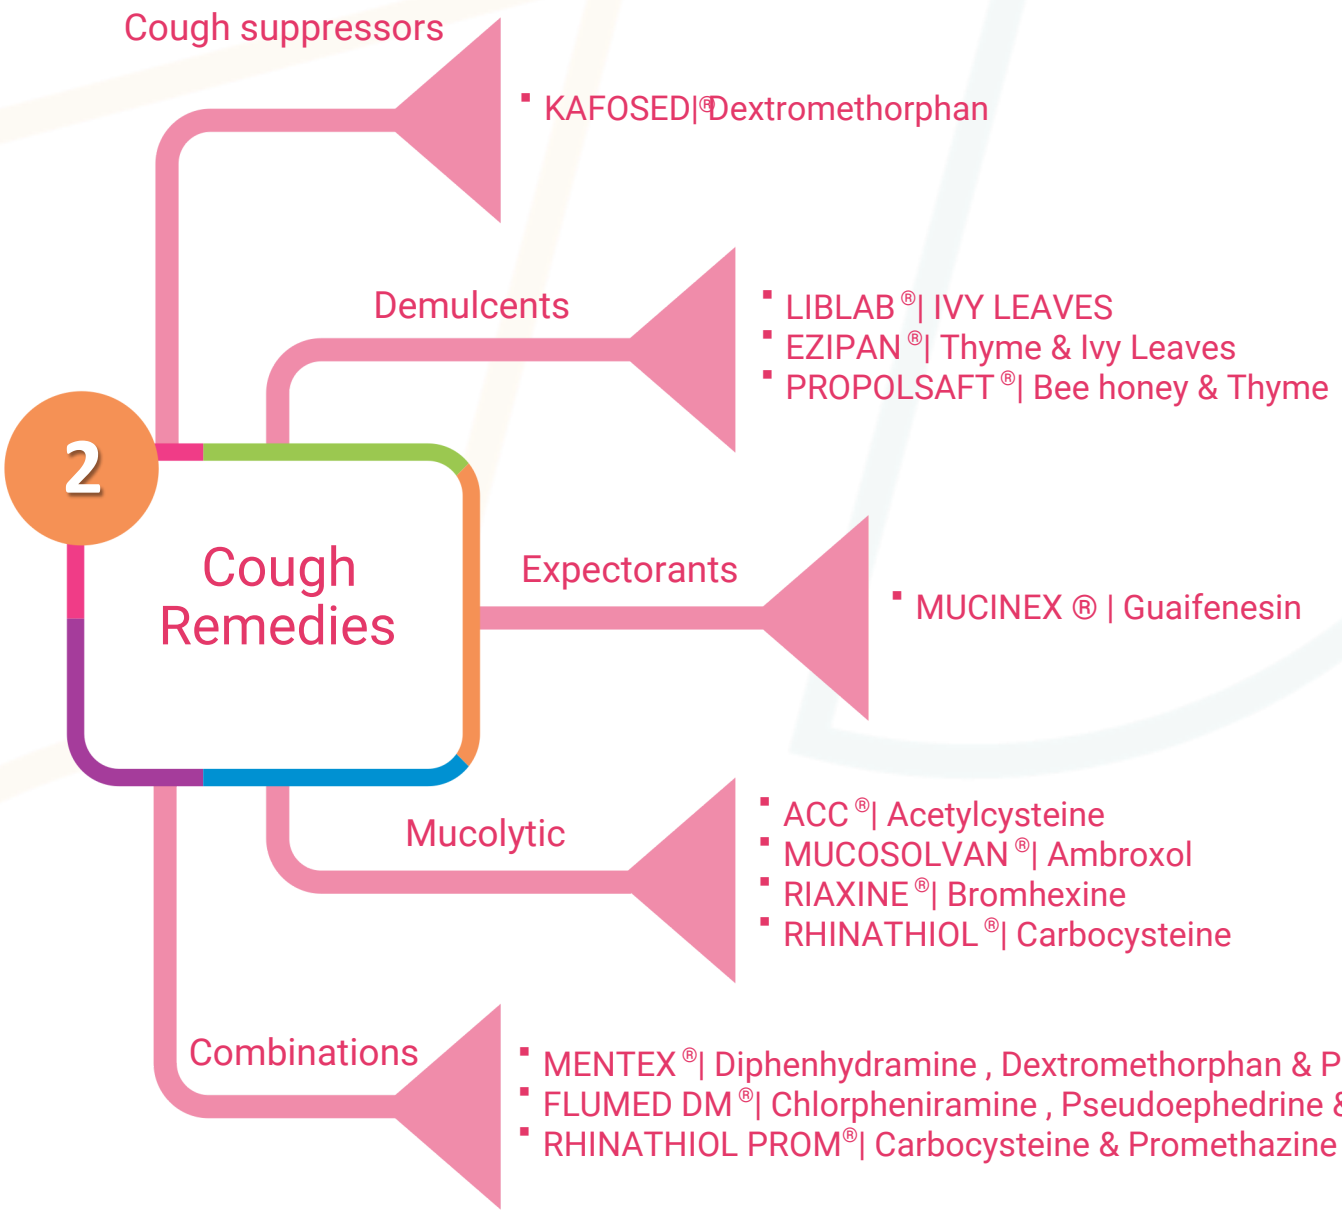

Cough is a protective reflex, but when it's persistent or bothersome, it can be treated based on its type (dry or productive)

1. Cough Suppressors (Antitussives) ✅
- Suppress the cough reflexcentrallyin the brain so they are Used For dry, irritating cough.

2. Mucolytics ✅
- Break down mucus → easier to clear, they are Used For thick mucus in productive cough.

3. Expectorants ✅
- Increase mucus outflow → easier to cough up, they are Used For productive cough.

4. Demulcents & Herbal Products ✅
- May act as mild expectorants or soothers that coat the throat lining can be Used For natural mild cough relief, or throat irritation.

2
Cough Remedies
Cough suppressors
KAFOSED|®Dextromethorphan
Demulcents
LIBLAB ®| IVY LEAVES
EZIPAN ®| Thyme & Ivy Leaves
PROPOLSAFT ®| Bee honey & Thyme
Expectorants
MUCINEX ® | Guaifenesin
Mucolytic
ACC ®| Acetylcysteine
MUCOSOLVAN ®| Ambroxol
RIAXINE ®| Bromhexine
RHINATHIOL ®| Carbocysteine
Combinations
MENTEX ®| Diphenhydramine , Dextromethorphan & Pseudoephedrine
FLUMED DM ®| Chlorpheniramine , Pseudoephedrine & Dextromethorphan
RHINATHIOL PROM®| Carbocysteine & Promethazine

Anti-Histamines

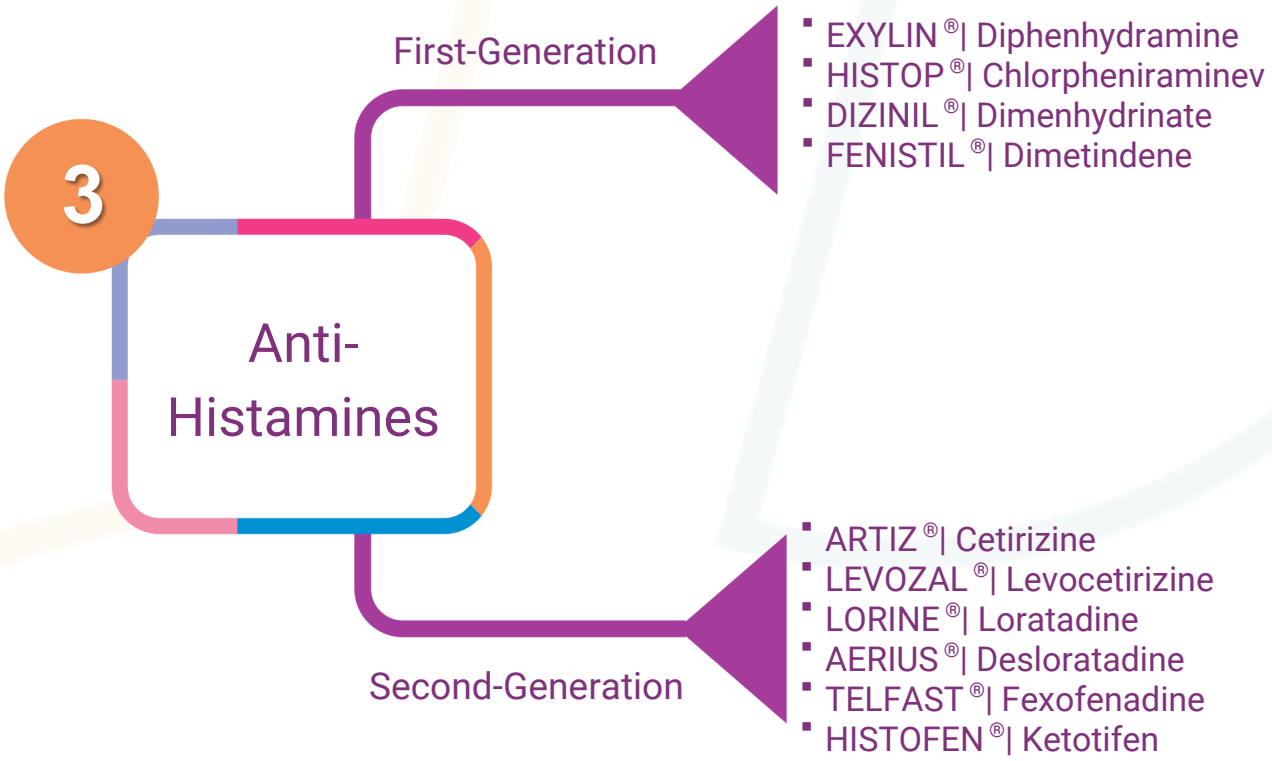

Antihistamines block H_1 receptors to reduce symptoms caused by histamine, such as allergy, sneezing, runny nose, itching, and cough.
They are divided into two types:

1st Generation Antihistamines ✅

- Can be used for Allergicrhinitis, cough, cold, itching, they cross the blood-brain barrier and cause drowsiness (Sedating effect) and they May cause dry mouth, dizziness, constipation so Often used at night due to sedating effect

2nd Generation Antihistamines ✅

- Can be Used for Allergic rhinitis, hives, mild allergic reactions, unlike 1st generation they do not easily enter the brain (non-sedating) so they are ideal for daytime use and Preferred for long-term allergy control

3
Anti-
Histamines
First-Generation
EXYLIN®| Diphenhydramine
HISTOP®| Chlorpheniraminev
DIZINIL®| Dimenhydrinate
FENISTIL®| Dimetindene
Second-Generation
ARTIZ®| Cetirizine
LEVOZAL®| Levocetirizine
LORINE®| Loratadine
AERIUS®| Desloratadine
TELFAST®| Fexofenadine
HISTOFEN®| Ketotifen
