1 Cleansing

There are 4 types of products: Cleanser, Micellar Water, Toner, Scrub.

1- Cleansing wash:
A fundamental part of the skincare routine, to remove dirt, oil, and impurities. It prepares the skin to absorb treatments, serums and moisturizers.
Key Characteristics
Its purpose is **cleansing only, not treatment.**
A. Soap Bar
Free of preservatives, reducing the risk of sensitivity.
Environmentally friendly and cost-effective.
Recommended for personal (single user) use only.
B. Liquid or Cream-Based Cleansers
More hygienic for multiple users.
- **Creamy & Oil-based cleansers** – Best suited for dry or sensitive skin.
- **Gel cleansers** – known for its ability to carry different active ingredients.
- **Foam cleansers** – Provide a deep clean, since its foamed already.

1 Cleansing

2- Micellar Water:

- A water-based cleanser that contains micelles—tiny spherical structures formed by surfactants.
- Works without harsh rubbing or rinsing and is mild enough to leave on the skin, making it ideal for sensitive or dry skin types.

Types of Micellar Water

A. One-Phase Micellar Water
   - Standard water-based solution with micelles.
   - Suitable for light cleansing or normal skin.

B. Bi-Phase (**Two-Phase**) Micellar Water.
   - Contains an oily layer and a Micellar water layer.
   - Must be shaken before use.
   - Ideal for removing waterproof makeup and for dry or sensitive skin due to its hydrating properties.

How to Use Micellar Water – Practical Steps

1 Cleansing

3- Scrub:

A scrub is a physical exfoliator that contains **small abrasive particles** designed to remove dead skin cells from the surface layer of the skin.

Benefits of Using a Scrub

- **Promotes Skin Renewal:** By removing dead skin cells, it encourages new, healthy skin to surface.
- **Improves Skin Texture**: Leaves the skin feeling smoother and looking more even.
- **Enhances Radiance**: Boosts natural glow by eliminating dullness.

How to Use a Scrub?

Frequency: Use 1 to 2 times per week, depending on skin type and sensitivity.

Note: Over-exfoliation may damage the skin barrier, cause irritation, or increase sensitivity. Always follow with hydration.

1 Cleansing

4- Toner:
Toner is the final step in cleansing your skin before applying a moisturizer.

Important: Toner is not rinsed off after use.

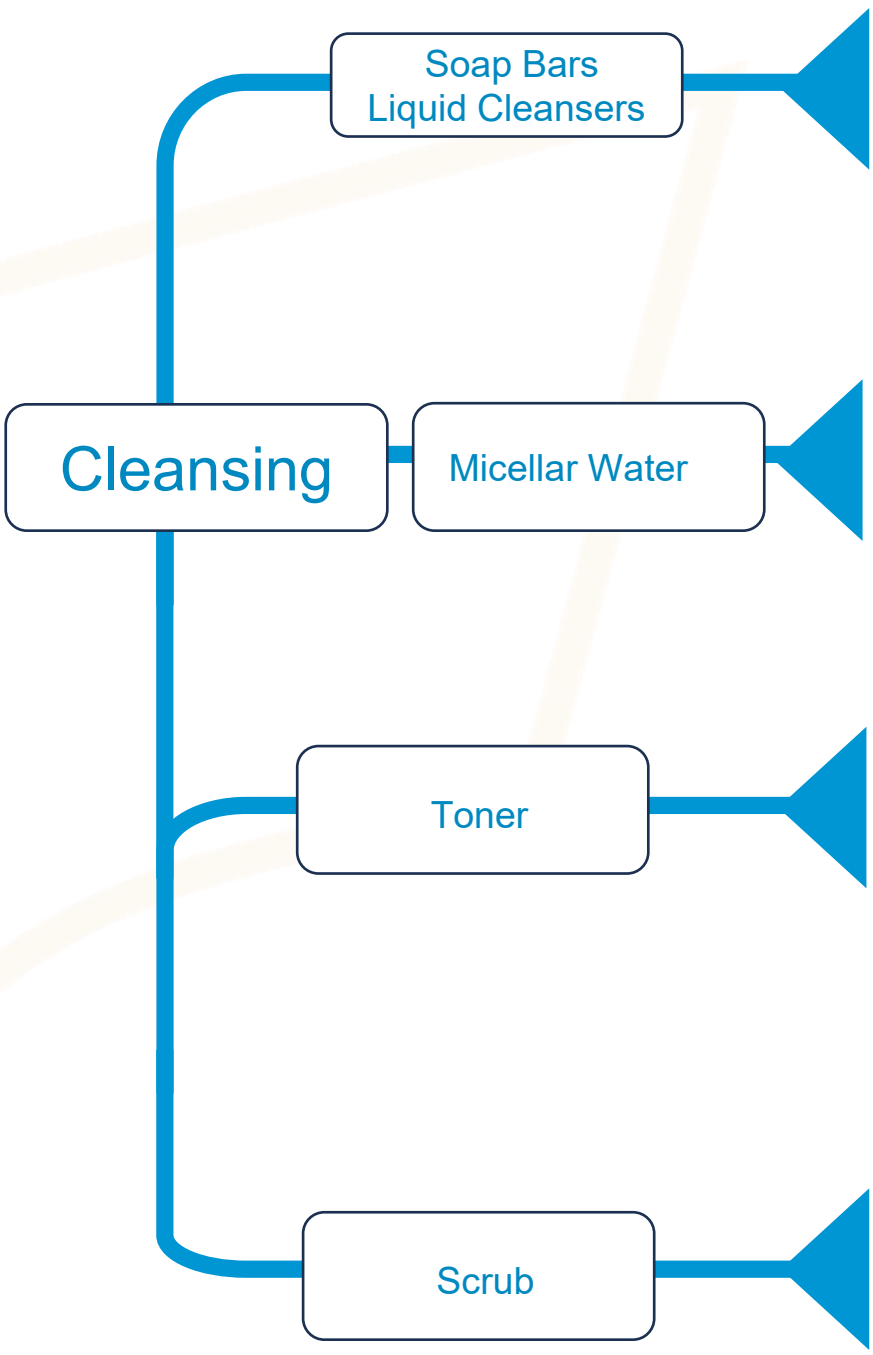

What does Toner do?

- Helps **tighten pores**.
- Gives a cool, refreshed feeling.
- It can hydrate, exfoliate, or even help with anti-aging **according to active ingredients** in their formula.
- Balances the skin's pH level.

Some toners use alcohol to tighten pores, but if your skin is sensitive, look for toners made with **witch hazel extract** instead.

1 Cleansing

- **CETAPHIL** gentle cleansing bar
- **MAXON** hydramax cleansing bar
- **BIODERMA ATODERM** cleansing oil

2 Moisturizers

1. Humectants, Rejuvenators – Attract water
These draw moisture from the air into your skin or from deeper layers.
Examples for humectants: Glycerin, Hyaluronic acid.
Examples for rejuvenators: collagen.
That kind of moisturizer suits all skin types.

2. Emollients – Smooth and soften skin
They fill in cracks and rough patches between skin cells.
Examples: Fatty acids, Ceramides
Suits Dry skin, rough or flaky areas, sensitive skin.

3. Occlusives – Seal moisture in
They form a protective layer over the skin to prevent water loss.
Examples: Petrolatum, Beeswax.
Used after humectants to keep its effect, It suits Very dry, eczema-prone, or damaged skin
